

## **BEST BUILD**

### LATHE METAL SCREWS

Best Build Lathe Metal Screws are self-drilling screws, which have higher density, better stability, durability, corrosion resistance, and wear resistance than ordinary screws.

Hydrogen treatment makes the material less prone to cracking during use and can be better fastened. Easy and fast installation. No pre-drilling required.

Ensures superior holding power in metal-to-metal or metal-to-aluminum connections, delivering a secure fit for demanding applications.

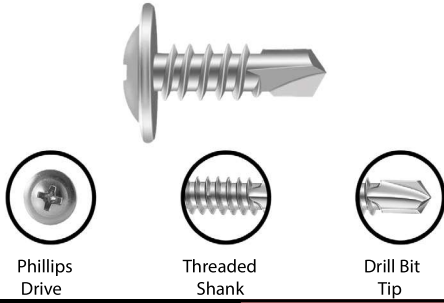

- ✓ *Self drilling*
- ✓ *Less prone to cracking*
- ✓ *Superior holding power in metal-to-metal connections*
- ✓ *Corrosion resistance*
